```

1.2 Sammenligning af filerne med diff

```
1 [chris@localhost opgave5]$ diff handin_solution_3.1.1.py handin_solution_3.1.2.py
2 4a5
3 >      # Read file as a list of lines and iterate over it
4 6a8
5 >      # Create empty field list for numeric values
6 8a11
7 >      # Translate string values to floats
8 11a15
9 >      # Add field_list.num to outer list
```

Diff lister de stykker der er forskellige. Tallene før linjen fortæller hvor i filen de findes. 4a5 betyder forskellen starter på linje 5 karakter 4. Større/mindre

end tegnet indikerer hvilken fil de ekstra tegn findes i. Den skal opfattes som en pil, så for at gå fra fil 1 til fil 2, så skal der tilføres de følgende tegn til. Hvis pilen havde vendt omvendt, skulle tegnene fjernes.

1.3 Side-by-side view af diff output

```

1 [chris@localhost opgave5]$ diff --side-by-side handin_solution_3.1.1.py
  handin_solution_3.1.2.py
2 with open("experimentalResults.txt") as f:                                with open("
  experimentalResults.txt") as f:
3
4     list_of_lists = []                                                    list_of_lists = []
5
6                                                                           >
6                                                                           > # Read file as a
6                                                                           > list of lines and
